**Declass Review by NGA.**

Dear Sir:

I am pleased to submit this monthly progress report on contract [redacted]  
for the period 15 May to 15 June 1970.

25X1

On approximately the 20th of May we received word from the COTR that the leak detector was satisfactory. However, an additional requirement has developed for the viewer drive assembly that it be more stable. Stability criteria were not discussed in the original modification requirement and had not been a part of [redacted] proposal for the contract. Nevertheless, it appears that increasing the stability of the drive assembly may not be an insurmountable problem provided we can get some data regarding the magnitude of the vibration problem and an indication of how much of it can be corrected by increasing the stability of the viewer assembly. Accordingly, on May 25, we requested some measurement data from the COTR to assist us in evaluation of the problem. These data were supplied on June 11th and we proceeded to change the modification to the viewer assembly to provide the desired stability.

25X1

We plan to complete the installation of the new viewer assembly modification within the next two weeks.

As soon as the Government has completed its evaluation and notified us of acceptance we will begin modification of Units 2, 3, and 4.

At this stage it is now impossible to complete modification of all four units by June 30, the current expiration date of the contract. Accordingly, we have initiated a request under separate cover to extend the contract to provide additional time for the modification of the remaining units.

Dear Sir:

I am pleased to submit this monthly progress report on contract  for the period 15 April to 15-May 1970.

25X1

We received the parts for the viewer drive mechanism and completed the assembly of the precision drive modification. The new assembly and the leak detector were installed on the  Chip Comparator on May 1.

25X1

The modification is now being evaluated by the COTR and we are awaiting Government acceptance before starting work on modification for Units 2, 3 and 4.

Dear Sir:

I am pleased to submit this monthly progress report on contract [Redacted] for the period 15 March to 15 April 1970.

25X1

During this period we made substantial progress on both phases of the modification of the Chip Comparator. The GFP lamp cooling assembly and the viewer drive mount assembly were received and used to design the modifications.

The leak detector for the lamp cooling system is complete and ready for installation. However, the ball screw drive for the viewer assembly is about two weeks behind schedule because of a delay in receiving parts.

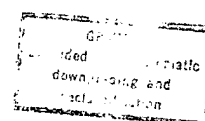

During the next period we will install both modifications on the first Chip Comparator and check out both the leak detector for the lamp cooling system and ball screw drive for the viewer assembly. Upon Government acceptance of these modifications we will be ready to proceed with the modifications to Units 2, 3 and 4.
